Rensselaer, New York, 12144

TITLE: THIRD AVENUE & BARRACKS ROAD PUMP STATION

RFP NUMBER: 19-11

ADDENDUM #7 – JANUARY 6, 2020

In response to questions received, Section 5.1 Task 1.1 (Gathering and Review of Information) Subsection C added as part of Addendum #4 is hereby modified as follows:

The July 15, 2019 Preliminary Feasibility Study report a recommendation was made that the entire collection system should be televised in order to develop pipe improvements. With the anticipated higher discharge rates of the proposed replacements stations as compared to the existing pumping equipment, television inspection of the gravity portions of the system downstream of the 3rd Avenue and Barracks Road pump stations may be necessary to evaluate the condition of existing sewers.

The Town intends that this inspection be carried out as part of this project. Offerors may include as an optional scope item carrying out the physical sanitary sewer inspection. Alternatively, offerors may assume that the Town will separately procure TV sewer inspection services needed to carry out this inspection. However, offerors should provide sufficient scope and budget in their proposals to review and analyze the inspection results, and to incorporate the findings into the final design.
