

July 27, 2018

Mr. Jason Diiulio  
Facilities Engineer  
Regeneron Pharmaceuticals, Inc.  
81 Columbia Turnpike  
Rensselaer, NY 12144

**Re: Regeneron Pharmaceuticals, Inc., Tempel Lane Campus; Revised Phasing Plan; CHA Project No. 33295**

Dear Mr. Diiulio:

This memo is provided to update the March 2018 Traffic Impact Study (TIS) completed for Regeneron Pharmaceuticals, Inc. for the Tempel Lane site in East Greenbush, NY to reflect proposed changes in the development sequencing of the project and minor changes in the development program, and to address the Town Engineer's comment letter dated 7/20/18.

The purpose of this memo is to identify the effects of these changes on the traffic mitigation measures and sequence of implementation as previously identified and approved by the Town of East Greenbush.

## Background

The March 2018 TIS analyzed the site with 208,000 SF of warehouse, 165,000 SF of manufacturing, and an 1,150-employee office/laboratory space for R&D. The project was proposed at the time to be constructed in the following phases:

- Phase 1 – 208,000 SF Warehouse (while a smaller warehouse was referenced in the text of the March 2018 TIS, the trip generation utilized in the analyses was based on 208,000 SF as noted in Table 4 in the TIS)
- Phase 2 – 1,150 employee office/laboratory space
- Phase 3 and 3a – 165,000 SF Manufacturing

## Development Program Changes

Subsequent to the completion of the March 2018 TIS, there have been several changes to the development program at Regeneron's Temple Lane Campus pertaining both to the configuration of uses and the sequencing of construction. These changes are as follows:

- Modified construction phasing;
- Increased building size of the final constructed size of the warehouse in Phase 1;
- Increased building size and number of employees for the manufacturing use; and
- Decreased number of employees for the office/lab use.

The current phasing plan will now have the manufacturing constructed in Phase 2 and the office/lab constructed in Phase 3. It is assumed that the construction of both of these phases will begin in 2018, with the manufacturing being completed first in early 2020 and the office/lab completed in late 2020.

A comparison of the previously approved SFEIS, the March 2018 TIS, and the current proposed development is provided in Table 1. As shown, the total number of employees for the current proposed development scenario is the same as the March 2018 TIS.

**Table 1**  
**Comparison of Development Program**

| <b>Development Phase</b> | <b>Approved SFEIS Development Scenario</b>     | <b>March 2018 TIS</b>                          | <b>Current Proposed Development Scenario</b>   |
|--------------------------|--|--|--|
| Phase 1                  | Warehouse<br>187,000 SF* /<br>150 employees    | Warehouse<br>208,000 SF /<br>150 employees     | Warehouse<br>212,300 SF /<br>145 employees     |
| Phase 2                  | Office/Lab<br>750 employees                    | Office/Lab<br>1,150 employees                  | Manufacturing<br>184,000 SF /<br>300 employees |
| Phase 3                  | Manufacturing<br>165,000 SF /<br>200 employees | Manufacturing<br>165,000 SF /<br>200 employees | Office/Lab<br>1,055 employees                  |
| Total Employees          | 1,100  | 1,500  | 1,500  |

\* Was analyzed with 208,000 SF

In addition, the preferred site access connection to 3<sup>rd</sup> Avenue Extension is now to extend Tempel Lane to 3<sup>rd</sup> Avenue Extension opposite Cedar Crest Drive (Alternative 2 in the March 2018 TIS), rather than a private access on 3<sup>rd</sup> Avenue Extension opposite of Woodlawn Avenue (Alternative 1 in March 2018 TIS). The extension of Tempel Lane to 3<sup>rd</sup> Avenue Extension is also NYSDOT's preference as stated in their June 12, 2018 review letter. This connection will be completed prior to the opening of the office/lab (Phase 3).

This memo will evaluate the effect of the changes in Regeneron's site phasing plan and the changes in their site plan.

## Site Generated Traffic

To be consistent with the Original October 2016 TIS and the March 2018 TIS update, the ITE Trip Generation Manual, 9th Edition was used to calculate the trip generation for the increase in size of the manufacturing

and warehouse components of the project, using land use code (LUC) 140 and LUC 150, respectively. ITE LUC 760 was used for the reduction in the number of office/lab employees.

### **Warehouse**

While the building footprint of the Warehouse (166,350 SF) is referenced in the March 2018 TIS, the trip generation utilized in the analyses was based on the gross floor area (208,000 SF) as noted in Table 4 in the March 2018 TIS. Table 2 below shows the trip generation of the warehouse facility based on the previous development concepts as well as for the current size of the facility (212,300 SF). Table 2 also shows the estimated trip generation based on employment rather than building size. The ITE trip generation data for this land use has a better statistical correlation of trips based on employment than based on building size. However, the estimated trip generation using the data correlated to employment is lower than based on building size. As this use is already approved, is currently under construction, and to be consistent with the October 2016 TIS and the March 2018 TIS, the gross SF calculations were used for this update. The final warehouse gross SF that has been constructed on the site is 212,300 SF. This increase in size results in 2 additional AM trips and 1 additional PM trip to the study network.

Table 2  
Warehouse Trip Generation Estimates

| Land Use                                    | Weekday AM |           |            | Weekday PM |           |           |
|---|------------|-----------|------------|------------|-----------|-----------|
|   | IN         | OUT       | TOTAL      | IN         | OUT       | TOTAL     |
| Warehouse<br>166,350 SF                     | 86         | 23        | 109        | 21         | 62        | 83        |
| Warehouse<br>208,000 SF<br>(March 2018 TIS) | 97         | 26        | 123        | 24         | 71        | 95        |
| Warehouse<br>145 Employees                  | 53         | 21        | 74         | 30         | 56        | 86        |
| <b>Warehouse<br/>212,300 SF</b>             | <b>99</b>  | <b>26</b> | <b>125</b> | <b>24</b>  | <b>72</b> | <b>96</b> |

It should be noted that there will be an office component to the warehouse to accommodate 145 desks for the warehouse employees, and not additional employees. ITE's LUC 150 for warehouse states that, "Warehouses are primarily devoted to the storage of materials, but they may also include office and maintenance areas." As the office space will be used for the warehouse employees, not additional employees, and can be included in the warehouse trip generation, the office space was not broken out as part of the trip generation.

### **Manufacturing**

Due to the significant difference between the building footprint and the gross floor area for the manufacturing, the trip generation for this use was reviewed based on the gross floor area of the building, the building footprint, and the number of employees. A summary of the trip generation based on these variables and the trip generation from the March 2018 TIS is provided in Table 3. As shown, the trip generation based on the manufacturing building footprint (184,000 SF) aligns with the trip generation based on the number of employees (300) for the site, with the total trips within four trips of each other. The trip

generation based on the gross floor area (346,110 SF) is not consistent with the trip generation based on the number of employees (approximately 115 trip difference). The ITE trip generation data for this land use shows a better statistical correlation of peak-hour trip generation to employment rather than building size. The ITE trip data points of actual trip generation at comparably-sized manufacturing sites are also lower than the calculated values using building size as the independent variable. Based on these considerations it is concluded that total gross floor area would not be an appropriate basis for estimating the trips for this land use.

To be consistent with the October 2016 TIS and the March 2018 TIS, the trip generation of the manufacturing component of the project was based on the size of the building footprint (SF) for this update. The trip generation estimate resulting from this method is also comparable to the employment-based estimate. The increase in the manufacturing size results in 14 additional AM and PM peak hour trips when compared to the estimate used in the March 2018 TIS.

**Table 3**  
**Manufacturing Trip Generation Estimates**

| Land Use   | Weekday AM |           |            | Weekday PM |           |            |
|--|------------|-----------|------------|------------|-----------|------------|
|  | IN         | OUT       | TOTAL      | IN         | OUT       | TOTAL      |
| Manufacturing<br>165,000 SF<br>(March 2018 TIS)          | 94         | 26        | 120        | 43         | 77        | 120        |
| <b>Manufacturing<br/>184,000 SF<br/>(Current Update)</b> | <b>105</b> | <b>29</b> | <b>134</b> | <b>48</b>  | <b>86</b> | <b>134</b> |
| Manufacturing<br>300 Employees                           | 100        | 37        | 137        | 61         | 77        | 138        |
| Manufacturing<br>346,110 SF                              | 197        | 56        | 253        | 91         | 162       | 253        |

#### **Office/Lab**

The office/lab component of the site is now estimated to accommodate 1,055 employees versus the 1,150 employees in the March 2018 TIS. This reduction in staff levels is estimated to reduce the trip generation by 31 trips in the AM peak hour and 39 trips in the PM peak hour, as shown in Table 4.

**Table 4**  
**Office/Lab Trip Generation Estimates**

| Land Use                              | Weekday AM |           |            | Weekday PM |            |            |
|---------------------------------------|------------|-----------|------------|------------|------------|------------|
|                                       | IN         | OUT       | TOTAL      | IN         | OUT        | TOTAL      |
| Office/lab<br>1,150 Employees         | 387        | 63        | 450        | 47         | 425        | 472        |
| <b>Office/lab<br/>1,055 Employees</b> | <b>360</b> | <b>59</b> | <b>419</b> | <b>43</b>  | <b>390</b> | <b>433</b> |

**Full Build - Trip Generation**

Table 5  
Revised Trip Generation – July 2018

| Land Use                             | Weekday AM |            |            | Weekday PM |            |            |
|--------------------------------------|------------|------------|------------|------------|------------|------------|
|                                      | IN         | OUT        | TOTAL      | IN         | OUT        | TOTAL      |
| Warehouse<br>212,300 SF              | 99         | 26         | 125        | 24         | 72         | 96         |
| Manufacturing<br>184,000 SF          | 105        | 29         | 134        | 48         | 86         | 134        |
| Office/Lab<br>1,055 Employees        | 360        | 59         | 419        | 43         | 390        | 433        |
| <b>July 2018 Total</b>               | <b>564</b> | <b>114</b> | <b>678</b> | <b>115</b> | <b>548</b> | <b>663</b> |
| <b>March 2018 Total</b>              | <b>578</b> | <b>115</b> | <b>693</b> | <b>114</b> | <b>573</b> | <b>687</b> |
| <b>Difference in Trip Generation</b> | <b>-14</b> | <b>-1</b>  | <b>-15</b> | <b>1</b>   | <b>-25</b> | <b>-24</b> |

While the number of employees will remain the same as the March 2018 TIS at the Tempel Lane site, the number of estimated site trips is estimated to be reduced, due to the reallocation of employees to different uses. As shown in Table 5, it is estimated that there will be 15 fewer AM and 24 fewer PM peak hour trips with the change in the site plan. It is therefore concluded that the findings of the Full Build Analysis from the March 2018 TIS will remain the same and do not need to be updated as a result of this change to the development program.

However, the higher warehouse and manufacturing trip generation numbers were used for this memo update for the purposes of analyzing the changed construction phasing (i.e., manufacturing facility preceding the office/lab facility). This will provide a conservative analysis, to determine what, if any, mitigation described in Section 5.3 of the March 2018 TIS, is required for site traffic associated with the combined warehouse and manufacturing site traffic (Phase 2).

## Site Plan Phasing

### **Phase 1**

Phase 1 of the Regeneron site plan consists of a 212,300 SF warehouse. This phase has been approved by the Town of East Greenbush and is currently under construction. No mitigation was identified for this phase at the study area intersections. Site traffic on the Regeneron driveway access to Tempel Lane will be monitored after completion of Phase 1 to confirm that the site trips are consistent with the Tempel Lane Campus – Supplemental Final Environmental Impact Statement which was approved by the Town of East Greenbush in May 2017. If the site trip generation exceeds the projected trip generation by 10%, then Regeneron will install automatic traffic recorders (ATRs) to count hourly traffic volumes over the course of an entire day on each approach of the NY Route 151 & Tempel Lane intersection and conduct a signal warrant evaluation at this location. Recommendations based on this analysis will then be provided.

**Phase 2**

Phase 2 of the Regeneron site plan consists of the warehouse constructed in Phase 1 and 184,000 SF of manufacturing. It is estimated that the warehouse and manufacturing will generate 259 total trips (204 in, 55 out) during the AM peak hour and 230 total trips (72 in, 158 out) during the PM peak hour. The traffic operations for this construction phase were tested without an access to 3rd Avenue Extension, as Tempel Lane would not be extended by the time the manufacturing was open. The site trips for Phase 2 were distributed to the study intersections based on the directional distribution used for Phase 1, which are provided in Appendix A. To determine what, if any, improvements will be needed for Phase 2, the study intersections were analyzed for the AM and PM peak hours.

It was found that all movements for Phase 2 will operate at the same LOS as No-Build with the exception of the following:

**AM Peak Hour**

- US Route 4 & I-90 Eastbound Ramps
  - Eastbound right – LOS B to LOS C
- US Route 4 & Grandview Drive/Greenbush Commons
  - Southbound left – LOS B to LOS C

**PM Peak Hour**

- US Route 4 & Grandview Drive/Greenbush Commons
  - Northbound thru/right – Increase of approximately 9 seconds of LOS F delay
- Red Mill Road (NY Route 151) & Tempel Lane
  - Southbound left/right – LOS C to LOS D

As shown in Tables 6 and 7, while there is a change in LOS when compared to No-Build for these movements, all are still estimated to operate at LOS D or better with the exception of the northbound thru/right movement at US Route 4 & Grandview Drive/Greenbush Commons which is over capacity in the PM No-Build condition. As it is estimated that there will be less than 10 seconds of added delay per vehicle for the northbound thru/right movement at US Route 4 & Grandview Drive/Greenbush Commons, mitigation is not recommended for this Phase. It is requested that an exception from the NYSDOT policy to maintain the same LOS as No-Build in the Build Condition be granted for these locations for Phase 2 of the development.

**Left-Turn Lane Warrants**

A left-turn lane warrant was reviewed for the Red Mill Road (NY Route 151) & Tempel Lane intersection for the Phase 2 development, and is provided in Appendix A. Since the measured 85<sup>th</sup> percentile speeds on Red Mill Road varied between 48 and 55 mph (eastbound and westbound, respectively), the volumes were compared to the guideline for both a 50 mph and 60mph operating speed. It was found that a left-turn lane is warranted for both the AM and PM peak hours for both conditions.

While a left-turn lane is warranted for this phase, due to the low volume of the movement (58 AM, 25 PM) and the acceptable LOS for the movement (LOS A for both peak periods), it is recommended that the installation of this left-turn lane be deferred until Phase 3 so that all turn lanes would be installed concurrently (eastbound left-turn, westbound right-turn, and southbound left-turn) with the installation of the traffic signal in Phase 3.

The Tempel Lane & Hotel Access Road left-turn lane warrant was not reviewed as it is not warranted in the full build-out of the site. The Tempel Lane & Regeneron Access and 3<sup>rd</sup> Avenue Extension & Tempel Lane left-turn lane warrants were not reviewed since Tempel Lane will not be extended for Phase 2.

### **Signal Warrants**

A signal warrant analysis was reviewed for the Red Mill Road (NY Route 151) & Tempel Lane intersection for the Phase 2 development and is provided in Appendix A. Hourly volumes were developed for Red Mill Road using the hourly distribution patterns from the ATR data collected on Red Mill Road applied to the peak hour traffic estimated for the Phase 2 Build conditions. For Tempel Lane, hourly volumes were estimated by applying the hourly volume distributions presented in the *Village at Tempel Farms Traffic Impact Study* (CME, 2006) to the peak hour volumes for the existing traffic on Tempel Lane and the site generated trips for the hotel that was recently constructed. Hourly volumes for the proposed Regeneron site were estimated by applying the hourly volume distribution at the existing campus on Discovery Drive to the peak hour site generated traffic.

As with the full build-out of the site, only the peak hour warrant is met for two hours of the day. It is not recommended that a signal be installed based on only meeting the peak hour warrant for this Phase. It is recommended that the signal be installed concurrently with the installation of the turn lanes for the Phase 3 development. However, the intersection will be monitored after the completion of Phase 2 for the installation of a traffic signal. It should be noted that the intersection will also be monitored for a signal after the completion of Phase 1 if the volumes on the Regeneron site driveway exceed the projected trip generation by 10% per Resolution 52-2017.

The signal warrant for the 3<sup>rd</sup> Avenue Extension & Tempel Lane intersection was not reviewed since Tempel Lane will not be extended for Phase 2.

### **Phase 3**

Phase 3 of the Regeneron site plan includes the warehouse constructed in Phase 1, manufacturing constructed in Phase 2, and an office/lab building with 1,055 employees. For this phase, Tempel Lane will be extended to 3<sup>rd</sup> Avenue Extension opposite of Cedar Crest Drive, providing a northbound left/thru lane and a right-turn lane at the intersection. In addition, all mitigation recommended in the March 2018 TIS will be implemented, which includes the following:

- US Route 4 & Grandview Drive/Greenbush Commons
  - Optimization of signal splits
- US Route 4 & 3rd Avenue Extension
  - Optimization of signal splits
- Red Mill Road (NY Route 151 & Tempel Lane)
  - Construct an eastbound left-turn lane, westbound right-turn lane, and southbound right-turn lane consistent with the proposed geometry in the *Village at Tempel Farms Traffic Impact Study*
  - Construct a traffic signal (with pedestrian equipment)
- 3rd Avenue Extension & Tempel Lane
  - Construct an eastbound and westbound two-way-left-turn lane
  - Monitor the intersection for the installation of a traffic signal

- US Route 4 & Red Mill Road (NY Route 151)
  - Modify the roundabout to include two lanes northbound and southbound consistent with the improvements identified in the Village at Tempel Farms and Route 4 Corridor studies.
  - Modify the eastbound approach to allow a left-turn movement from both lanes
- US Route 4 & Hotel Access (Hampton Inn)
  - Construct a southbound right-turn lane on Route 4
- Tempel Lane
  - Construct a southbound left-turn lane on Tempel Lane at the Regeneron Access

At the Tempel Lane & Regeneron Access, the following lane geometry will be provided:

- Southbound left-turn lane
- Southbound thru lane
- Northbound thru/right lane
- Westbound left/right lane
- Two inbound lanes to Regeneron

#### **Intersection Monitoring Recommendations**

Since the project will be constructed in phases, it is recommended that a traffic monitoring program be implemented. This would include bi-annual traffic counts at the site to confirm the trip generation after each phase of development. For Phase 1, if the site trip generation exceeds the projected trip generation by 10%, then Regeneron will install automatic traffic recorders (ATRs) to count hourly traffic volumes over the course of an entire day on each approach of the NY Route 151 & Tempel Lane intersection and conduct a signal warrant evaluation at this location. Recommendations based on this analysis will then be provided. For phases 2 and 3, intersections that are noted to be monitored in the future for traffic signal installation (Phase 2 – NY Route 151 & Tempel Lane, Phase 3 – 3<sup>rd</sup> Avenue Extension & Tempel Lane/ Cedar Crest Drive) would also be included in the traffic monitoring program to determine if they meet signal warrant criteria. The bi-annual traffic monitoring program conducted at the site entrance and above referenced intersections will provide the opportunity to confirm that traffic volumes and patterns are consistent with those estimated, or if volumes vary than those estimated, to revise the phased mitigation plan, as needed. The traffic monitoring program will no longer be necessary if traffic evaluations conducted in two consecutive years after the site is completely occupied indicates that the proposed development does not warrant the installation of traffic signals at the intersections noted above.

**Table 6**  
**Regeneron**

## Tempel Lane Pavement Recommendations

The March 2018 TIS provided pavement recommendations for Tempel Lane for each phase of development based on a November 2016 pavement evaluation for the roadway. The recommendations from this pavement evaluation were approved by the Town of East Greenbush as part of the Tempel Lane Campus – Supplemental Final Environmental Impact Statement. The following were the recommendations for each phase of the development:

- Phase 1 – The existing 1" of top course of pavement will be milled, and a 1.5" top course asphalt layer will be placed on the milled pavement with the warehouse construction
- Phase 2 – Tempel Lane will be box widened to 32 feet, and an additional 1.5" of top course will be provided. Improvements will also include drainage improvements such as regrading/reshaping of ditches and/or installation of edge drains
- Phase 3 – No additional improvements

The 2016 pavement evaluation was conducted prior to the start of construction for the warehouse and two freeze/thaw cycles have occurred since the evaluation. As a result, further degradation of Tempel Lane has occurred since the evaluation. In addition, additional existing pavement has been uncovered, increasing the known existing width of Tempel Lane to 32'. Due to the further deterioration of Tempel Lane and the increased known width of Tempel Lane, the proposed improvements to Tempel Lane have been revised, and are as follows:

- Phase 1 – Spot repairs where pavement is currently crumbling
- Phase 2 – Spot repairs where needed
- Phase 3 – Full depth reclamation with new asphalt top course for existing roadway (32' width)

It should be noted that construction vehicles will need to utilize Tempel Lane for the construction of Phases 2 and 3. Due to the heavy construction equipment that will be utilizing the roadway, it is recommended that the Tempel Lane full depth reclamation with new asphalt top course be completed after this traffic is removed in Phase 3. This is a change from Stantec's Pavement Evaluation memo which included the full depth reclamation and new top course in Phase 2. At the time of that memo, it was thought that all construction vehicles could utilize the north utility corridor for Phases 2 and 3.

Due to existing ROW and environmental constraints, the shared use path that was recommended in the October 2016 TIS will not be constructed for Phase 3, but will be considered in the future. As mentioned in the March 2018 TIS, pedestrians and bicyclists will be accommodated on the shoulder of Tempel Lane, which is consistent with the accommodations on 3<sup>rd</sup> Avenue Extension and Red Mill Road. Pedestrian accommodations, including pedestrian signals, pushbuttons and curb ramps will be included in the signal design/turn lane reconstruction at Tempel Lane & Red Mill Road.

A summary of the timeline for the proposed Phasing mitigation and pavement improvements are shown in Table 8.

## Updates to the March 2018 TIS

The following provides an update to the March 2018 TIS to address the Town Engineers comments in the review letter dated 07/20/2018, that were not addressed in the preceding sections. Only the comments pertaining to the final preferred alternative (Extension of Tempel Lane to 3<sup>rd</sup> Avenue Extension opposite of Cedar Crest Drive) are addressed in this document, as the comments related to the other alternative (Private Regeneron access at Woodlawn Avenue & 3<sup>rd</sup> Avenue Extension) are no longer applicable.

The following Tables, Exhibits, and Figures from the March 2018 TIS have been provided within this memo or in Appendix B for this update:

- Table 9 – No-Build & Build Analysis Alternative 2 (AM Peak Hour)
- Table 10 – No-Build & Build Analysis Alternative 2 (PM Peak Hour)
- Table 13 – No-Build & Build Analysis Alternative 2 - Mitigation (AM Peak Hour)
- Table 14 – No-Build & Build Analysis Alternative 2 - Mitigation (PM Peak Hour)
- Exhibit 2 - Phase Mitigation Improvements
- Table 20 – Sight Distance (3<sup>rd</sup> Avenue Extension & Tempel Lane) (provided for reference)
- Figure 7 – Site Trip Assignment Alternative 2 – AM Peak Hour
- Figure 8 – Site Trip Assignment Alternative 2 – PM Peak Hour (provided for reference)
- Figure 10 – 2020 Build Peak Hour Traffic Volumes Alternative 2 (provided for reference)
- Figure E-5 - 3<sup>rd</sup> Avenue Extension & Cedar Crest Drive / Tempel Lane
- AASHTO Guide for Left-turn Lanes on Two-Lane Highways – 3<sup>rd</sup> Ave Ext & Tempel Lane
- AASHTO Guide for Left-turn Lanes on Two-Lane Highways – NY 151 & Tempel Lane (50 mph and 60 mph)
- AASHTO Guide for Left-turn Lanes on Two-Lane Highways – Tempel Lane & Regeneron Access
- AASHTO Guide for Left-turn Lanes on Two-Lane Highways – Tempel Lane & Tempel Farms (Hotel Access)
- HCM Reports for Build Analysis 2 with Mitigation – 3<sup>rd</sup> Avenue Extension & Cedar Crest Drive / Tempel Lane

### **3rd Avenue Extension & Cedar Crest Drive / Tempel Lane Extension**

In the March 2018 TIS, the northbound left-turn movement from Tempel Lane was conservatively modeled in the Build with Mitigation condition to only allow one-stage turning. It was noted in the TIS that with the proposed two way left-turn lane (TWLTL), vehicles will be able to use the median to make a two-stage left-turn if they are unable to find a simultaneous gap on 3<sup>rd</sup> Avenue Extension in both directions, which will help improve operations for the northbound left/thru movement. With the one-stage analysis, the northbound left/thru movement was estimated to operate at LOS F during the AM peak hour and LOS E during the PM peak hour. While the TIS provides a conservative estimate of the northbound left/thru movement operations, the Town's Engineer recommended that the intersection be modeled with the two-stage left-turn to show the improved operations if the two-stage left-turn is utilized. As shown in Tables 13 and 14 in Appendix B, the northbound left-turn is estimated to operate at LOS D in the AM peak hour and LOS C in the PM peak hour with the two-stage left-turn. As shown, if a vehicle utilizes the TWLTL to make a left-turn, operations will improve for the northbound left/thru movement. In this case, traffic signal control

may not be needed. However, the recommended mitigation remains the same as the March 2018 TIS for this intersection which includes the following:

- Construct eastbound and westbound TWLTL
- Monitor traffic volumes at the intersection for the installation of a traffic signal after the completion of Phase 3

An assessment of available right-of-way (ROW) for the construction of the TWLTL was conducted as part of this Memo. Based on available Rensselaer County 2017 parcel boundary maps, the proposed improvement can be accommodated within the existing ROW. The property boundaries have been placed on the intersection concept figure E-5 in Appendix B. Additional assessment of ROW impacts for the TWLTL will be required during the design phase of the roadway improvements.

Sight distance was also revisited for this memo for the extension of Tempel Lane to the 3<sup>rd</sup> Avenue Extension and Cedar Crest Drive intersection based on the Town Engineer's comments. Per AASHTO's *A Policy on Geometric Design of Highway and Streets*, 2011, for the following situations, it is advisable to check the availability of sight distance for crossing maneuvers:

- Where left or right-turns or both are not permitted from a particular approach and the crossing maneuver is the only legal maneuver
- Where the crossing vehicle would cross the equivalent width of more than six lanes
- Where substantial volume of heavy vehicles cross the highway and steep grades that might slow the vehicle while its back portion is still in the intersection are present on the departure roadway on the far side of the intersection

As none of these situations are present at the 3rd Avenue Extension & Cedar Crest Drive/ Tempel Lane intersection, and only the TWLTL is being added to the mainline (3-lanes to cross total), the right-turn from stop distance is sufficient for the crossing maneuver per AASHTO. As the left-turn sight distance requirements are greater than the right-turn requirements, and the left-turn requirements are met for this intersection, there is sufficient sight distance for the crossing maneuver.

The following is Table 20 from the March 2018 TIS for reference:

**Table 20**  
**Sight Distance**  
**3rd Avenue Extension & Tempel Lane / Cedar Crest Drive**

|             | Intersection Sight Distance                              |                                      |                                       | Stopping Sight Distance                                 |           |
|-------------|--|--------------------------------------|---------------------------------------|---|-----------|
|             | Right-turn<br>from Tempel<br>Lane /<br>(D <sub>L</sub> ) | Left-turn from<br>Tempel Lane        |                                       | Left-turn<br>from<br>Major<br>Road<br>(D <sub>S</sub> ) | SSD<br>EB |
|             |  | Looking<br>Left<br>(D <sub>L</sub> ) | Looking<br>Right<br>(D <sub>R</sub> ) |   |           |
| Available   | >1000 ft.  | >1000 ft.                            | 650 ft.                               | >1000 ft.   | >1000 ft. |
| Recommended | 480 ft.  | 555 ft.                              | 555 ft.                               | 405 ft.   | 425 ft.   |

#### **Regeneron Access**

A security gate will be constructed on Regeneron's access Road from Tempel Lane. The lift-arm gate will be located approximately 450' from Tempel Lane as shown in the Tempel Lane Campus Paving, Layout, & materials Plan (Area E) in Appendix B. With the two-lanes provided from Tempel Lane, this provides queueing space for approximately 36 vehicles. One lane will be reserved for Regeneron employees, the other will mainly be utilized by contractors and guests. Regeneron employees currently swipe their security badge at a card reader which lifts the gate arm, the average time to get through the gate is 3 to 5 seconds. Radio transponders are planned for future installation at the gates, which will help increase the processing time for Regeneron employees. During the AM peak hour, 578 vehicles are estimated to enter the Regeneron site, or approximately 9-10 vehicles per minute. It is estimated that all vehicles will be processed within this minute, and there is sufficient storage space (approximately 450' or 18 vehicles per lane), if a queue were to form.

Contractors and guests are required to stop at the security gate. Average time at the window is approximately 2 minutes for these users. At Regeneron's Discovery Drive facility, which is larger than the proposed Tempel Lane campus, the 150' of available storage is typically sufficient to process this traffic, with only a few instances of the queue backing up to the mainline during a typical month. It is estimated that the queue for Tempel Lane will be consistent with or shorter than the one observed for Discovery Drive.

#### **Tempel Farms Analysis**

Per direction from NYSDOT, the Tempel Farms development had been removed from the March 2018 TIS, as it was unknown when, if ever, the Tempel Farms site will be built with its required mitigation. This analysis without Tempel Farms was consistent with the Sensitivity Analysis from the October 2016 TIS, which identifies Regeneron's impacts without the Tempel Farms proposed mitigation and site traffic. In order to receive approval for the SEQRA amendment, a separate analysis has been conducted for a scenario with the Tempel Farms development and proposed mitigation included. To be consistent with the March 2018 TIS, the full build out site trips that were utilized for that report were utilized for this update with Tempel Farms. As noted in the Trip Generation section, the site trips for the current site plan

are estimated to be slightly less than the March 2018 TIS volumes, but this difference will not have an impact on the findings and mitigation recommendations.

#### **No-Build Conditions – With Tempel Farms**

The traffic volumes for the 2020 No-Build – With Tempel Farms scenario are the same as those represented in the October 2016 TIS for this update. The Village at Tempel Farms Traffic Impact Study identified improvements to the study area intersections to mitigate the impacts of that project. These improvements were included in the No-Build analysis for this scenario and are as follows:

- A right-in/right-out access on Route 4 to the Hotel Access Road between the I-90 Exit 9 Eastbound Ramps and Route 151 will be built with a 12-foot southbound right-turn lane
- Tempel Lane will be extended to 3<sup>rd</sup> Avenue Extension
- A single lane roundabout will be built at the Tempel Lane & Tempel Farms (Hotel Access Road) driveway
- A two-lane roundabout, which is consistent with the Route 4 Corridor Study (two lanes northbound and southbound), will be built at the Route 4 & Route 151 intersection. The new lane configuration will allow for a left/thru lane and thru/right lane on the northbound and southbound approaches, and a left-turn lane and left/thru/right lane on the eastbound approach. The westbound approach will remain the same as existing with a left/thru/right lane
- At Route 151 & Tempel Lane, a signal will be installed and an eastbound left-turn lane, westbound right-turn lane, and southbound right-turn lane will be built
- At 3<sup>rd</sup> Avenue Extension & Tempel Lane, a northbound right-turn lane will be installed and a two-way left-turn lane will be installed on 3<sup>rd</sup> Avenue Extension

At the intersection of US Route 4 & I-90 Westbound Ramps, a signal will be installed by NYSDOT as part of a Safety Improvement Project, which was included in the No-Build analysis. This is a change from the October 2016 TIS where the intersection was to be striped to restrict westbound left-turns, as proposed in the Route 4 Corridor Study.

To determine No-Build traffic operating conditions at the study area intersections, a capacity analysis was performed using SYNCHRO 10 software. The roundabout analyses were performed using Sidra 7 software. This is an update to the October 2016 TIS where SYNCHRO 8 and Sidra 6 software was used. The update in software resulted in minor differences in delay for the Existing and No-Build conditions when compared to the October 2016 TIS.

A summary of the No-Build LOS and Delay is provided in Tables 9 and 10.

#### **Build Condition – with Tempel Farms**

As mentioned above, the traffic volumes for the Build Condition – with Tempel Farms scenario were developed by combining the 2020 No-Build volumes with the site generated traffic for the full build out of the site that were presented in the March 2018 TIS. Using the No-Build geometry and existing signal timings, the study intersections were analyzed using the projected Build volumes for the Regeneron Tempel Lane site.

As shown in Tables 9 and 10, the addition of the traffic generated by the Regeneron project reduces the LOS for some movements at study area intersections when compared to the No-Build scenario with Tempel Farms and associated improvements. In many cases, the traffic operations will continue to be within acceptable LOS thresholds.

The following are the changes:

#### AM Peak Hour

- US Route 4 & 3<sup>rd</sup> Avenue Extension
  - Eastbound right – LOS B to LOS C
- 3<sup>rd</sup> Avenue Extension & Cedar Crest Drive /Tempel Lane
  - Northbound left – LOS C to LOS E
- US Route 4 & Red Mill Road (NY Route 151)
  - Westbound right – LOS B to LOS C
  - Northbound thru/right – LOS A to LOS B

#### PM Peak Hour

- Red Mill Road (NY Route 151) & Tempel Lane
  - Eastbound left – LOS A to LOS B
  - Eastbound thru – LOS A to LOS B
  - Southbound left – LOS B to LOS C
- US Route 4 & I-90 Eastbound Ramps
  - Eastbound Right – Increase in LOS F delay (approximately 3 seconds/vehicle)
  - Northbound left – LOS B to LOS C
  - Northbound thru – LOS B to LOS C
- US Route 4 & I-90 Westbound Ramps
  - Westbound left – LOS B to LOS C
  - Northbound right - LOS A to LOS B
- US Route 4 & 3<sup>rd</sup> Avenue Extension
  - Eastbound left – LOS C to LOS D
  - Northbound left – LOS C to LOS D
  - Northbound thru – LOS B to LOS C
  - Southbound thru – LOS B to LOS C
  - Southbound thru/right – LOS B to LOS C
- US Route 4 & Grandview Drive/Greenbush Commons
  - Northbound thru/right – Increase in LOS F delay (approximately 45 seconds/vehicle)
- 3<sup>rd</sup> Avenue Extension & Barracks Road
  - Northbound left – LOS A to LOS B
- US Route 4 & Hotel Access
  - Eastbound right – LOS E to LOS F
- 3<sup>rd</sup> Avenue Extension & Cedar Crest Drive/Tempel Lane
  - Northbound left – LOS C to LOS E
  - Northbound right – LOS B to LOS C
  - Southbound left/thru/right – LOS C to LOS D

- US Route 4 & Red Mill Road (NY Route 151)
  - Eastbound left – Increase in LOS F delay (approximately 157 seconds/vehicle)
  - Eastbound left/thru/right – Increase in LOS F delay (158 seconds/vehicle)
  - Westbound right – LOS A to LOS B
  - Northbound left/thru – LOS B to LOS C
  - Southbound left/thru – LOS B to LOS C
- Tempel Lane & Tempel Farms
  - Eastbound left/thru/right – LOS A to LOS B
  - Northbound left/thru/right – LOS A to LOS B
  - Southbound left/thru/right – LOS A to LOS B

At the new intersection of Tempel Lane & the Regeneron access, the westbound left/right movement is estimated to operate at LOS F and the southbound left is estimated to operate at LOS A during the PM Peak Hour. For the AM peak hour, all movements are estimated to operate at LOS C or better.

\*Movement; Volume to Capacity Ratio; Level of Service; Approach

**Build with Mitigation Condition – with Tempel Farms**

To mitigate the operational impacts associated with the addition of the Regeneron project-generated traffic noted above, the following improvements are proposed:

- US Route 4 & Grandview Drive/Greenbush Commons
  - Optimization of signal splits
- US Route 4 & 3<sup>rd</sup> Avenue Extension
  - Optimization of signal splits
- 3<sup>rd</sup> Avenue Extension & Tempel Lane
  - Installation of a traffic signal
  - Convert the TWLTL's to left-turn lanes
- Tempel Lane & Regeneron Access
  - Install westbound right-turn lane
  - Install southbound left-turn lane

As shown in Tables 11 and 12, the No-Build movement LOS will be maintained with these improvements, with the exception of the following:

**AM Peak Hour**

- US Route 4 & 3<sup>rd</sup> Avenue Extension
  - Eastbound right – LOS B to LOS C
- US Route 4 & Grandview Drive/ Greenbush Commons
  - Northbound left – LOS A to LOS B
  - Northbound thru/right – LOS C to LOS D
- US Route 4 & Red Mill Road (NY Route 151)
  - Westbound right – LOS B to LOS C
  - Northbound thru/right – LOS A to LOS B

**PM Peak Hour**

- Red Mill Road (NY Route 151) & Tempel Lane
  - Eastbound left – LOS A to LOS B
  - Eastbound thru – LOS A to LOS B
  - Southbound left – LOS B to LOS C
- US Route 4 & I-90 Eastbound Ramps
  - Eastbound Right – Increase in LOS F delay (approximately 3 seconds/vehicle)
  - Northbound left – LOS B to LOS C
  - Northbound thru – LOS B to LOS C
- US Route 4 & I-90 Westbound Ramps
  - Westbound left – LOS B to LOS C
  - Northbound right - LOS A to LOS B
- US Route 4 & 3<sup>rd</sup> Avenue Extension
  - Northbound left – LOS C to LOS D
  - Southbound thru – LOS B to LOS C
  - Southbound thru/right – LOS B to LOS C

- US Route 4 & Grandview Drive/Greenbush Commons
  - Westbound left/thru/right – LOS E to LOS F
  - Northbound thru/right – Increase in LOS F delay (approximately 28 seconds/vehicle)
- 3<sup>rd</sup> Avenue Extension & Barracks Road
  - Northbound left – LOS A to LOS B
- US Route 4 & Hotel Access
  - Eastbound right – LOS E to LOS F
- US Route 4 & Red Mill Road (NY Route 151)
  - Eastbound left – Increase in LOS F delay (approximately 157 seconds/vehicle)
  - Eastbound left/thru/right – Increase in LOS F delay (158 seconds/vehicle)
  - Westbound right – LOS A to LOS B
  - Northbound left/thru – LOS B to LOS C
  - Southbound left/thru – LOS B to LOS C
- Tempel Lane & Tempel Farms
  - Eastbound left/thru/right – LOS A to LOS B
  - Northbound left/thru/right – LOS A to LOS B
  - Southbound left/thru/right – LOS A to LOS B

At the new intersection of Tempel Lane & the Regeneron access all movements are estimated to operate at LOS D or better for both peak hours.

It is noted that traffic operations at many of the locations where there will be a change in LOS will continue to provide acceptable operations, with LOS ranging from LOS B to LOS D. Locations where this is not the case are discussed as follows.

#### **US Route 4 & Grandview Drive/Greenbush Commons**

The northbound approach operates over capacity under the No-Build condition during the PM peak hour. Any increase in traffic volume results in an impact since the system is already over capacity. The addition of the Regeneron site traffic causes the northbound approach to have an increase in LOS F delay. For the mitigation analysis, the signal timings were optimized. With optimization, overall delay and northbound delay are improved, but the northbound movement does not get fully back to No-Build delay with 28 seconds of added delay in the Build with Mitigation condition (73.7 sec/veh No-Build, 101.7 sec/veh Build). The optimization does impact the westbound approach which goes from LOS E to LOS F. However, it is a low volume approach, and the 50<sup>th</sup> and 95<sup>th</sup> percentile queues are 31' and 78', respectively.

During the AM peak hour, there is minor increase in delay for the northbound movements due to reallocation of green time in the signal optimization. Both movements are still estimated to operate at LOS D or better which is considered acceptable for signalized movement. The northbound left-turn delay is estimated to increase approximately 1 second and the northbound thru/right movement is estimated to increase approximately 4 seconds.

Since there are existing operational deficiencies at the intersection in the PM No-Build condition, unrelated to the Regeneron project, capital improvements should be considered and programmed in this portion of the US Route 4 corridor. The only improvement that will fully alleviate the congestion at this location is the

construction of an additional northbound through lane on US Route 4, which is a major corridor-wide improvement that the Town of East Greenbush, the Town of North Greenbush, and NYSDOT should consider. Other mitigation measures were considered for this intersection, including a roundabout and signal coordination with adjacent signals. A roundabout does not appear to be feasible at this location as the footprint of a two-lane roundabout would have ROW impacts and impacts to the operation of properties on the east side of US Route 4. Coordination on US Route 4 between the Grandview Drive and 3rd Avenue Extension intersections was tested, and it could reduce the queues and delay for the northbound approach during the PM peak hour slightly. However, it does increase delay on the minor approaches. Implementing a coordinated system would have to be reviewed in a larger context than this study since there are other signals within the corridor that are not included in the study area. As a result, no additional mitigation measures are recommended for this intersection as a result of this project. It is requested that an exception from the NYSDOT policy to maintain the same LOS as No-Build in the Build Condition be granted at this location.

### **US Route 4 & Hotel Access**

The eastbound right-turn movement is estimated to operate at LOS E under the PM No-Build condition. With the addition of the Regeneron site traffic the LOS is estimated to be LOS F. It is assumed that if there are delays for the eastbound right-turn movement, traffic may utilize the signalized intersection at US Route 4 & Red Mill Road (NY Route 151) instead to exit Tempel Lane to help reduce their delay. This is consistent with the Village at Tempel Farms Traffic Impact Study, which included Tempel Farms site traffic and Mill Creek development site traffic, and was projected to operate at LOS F during the PM peak hour. It should be noted that traffic can also use the signal at 3<sup>rd</sup> Avenue Extension & Tempel Lane as an alternate route to their destination. It is requested that an exception from the NYSDOT policy to maintain the same LOS as No-Build in the Build Condition be granted at this location.

### **3<sup>rd</sup> Avenue Ext & Tempel Lane:**

With both the Tempel Farms site traffic and the Regeneron site traffic, the northbound left-turn movement is estimated to operate at LOS E during both the AM and PM peak hours. Since the four-hour warrant, eight-hour warrant, and peak hour warrant were met for this location in the October 2016 TIS, and the volume is now estimated to be higher for the current site plan, it is recommended that a traffic signal be installed. With the installation of the signal, all movements are estimated to operate at LOS B or better.

### **Route 4 & Route 151:**

No-Build traffic operations of the eastbound approach to this roundabout will be LOS F in the scenario with Tempel Farms site traffic included with the other background growth. The addition of the Regeneron site traffic is estimated to increase the delay for this approach. The addition of an eastbound right slip-ramp could help reduce delay for the approach; however, due to the underground stormwater storage tanks located adjacent to the roundabout, this type of improvement was deemed unfeasible.

With no feasible physical improvements that will alleviate the delay on the eastbound approach of the roundabout, Travel Demand Management (TDM) strategies , such as carpooling incentives, alternate works hours, and transit accommodations will be offered by Regeneron to its employees at the Tempel Lane campus. These are consistent with current Regeneron policies used at their existing main campus on Discovery Drive, where flex hours are available to office employees, with their workday starting anywhere

from 6am to 9am. These types of TDM measures are also consistent with the CDTC's regional Congestion Management Plan. These TDM measures will reduce the site trip load during the peak hour of the adjacent street traffic. As noted in the DEIS for the East Greenbush Tech Park – Phase 2, this condition is expected to be limited to the PM peak, with acceptable operations estimated for the remainder of the day. It is requested that an exception from the NYSDOT policy to maintain the same LOS as No-Build in the Build Condition be granted at this location.

At the remaining locations where there is a change in LOS, there are minor increases in delay, with 9 seconds of additional delay being the maximum difference between No-Build and Build with Mitigation. It is requested that an exception from the NYSDOT policy to maintain the same LOS as No-Build in the Build Condition be granted at the locations where No-Build LOS cannot be maintained.

#### **Improvement Phasing Analysis – Tempel Farms**

All mitigation measures for the combined Regeneron and Tempel Farms condition are recommended to be implemented in Phase 3 with the opening of the office/lab facilities. However, it is recommended that the intersection of 3<sup>rd</sup> Avenue Extension & Tempel Lane be monitored for the installation of a traffic signal for Phase 1 (only if the trip generation at the site driveway is greater than 10% of the approved site traffic) and Phase 2 of the development since a signal will not be installed with the Tempel Farms development. It should be noted, that since the warehouse will be opening this year (2018), and the manufacturing is estimated to be completed by early 2020, both uses will likely be open before Tempel Farms is constructed.

A summary of the mitigation improvements is provided in Table 13.

**Table 11**  
**Regeneron**

## Fair Share Funding Assessment

Many of the physical improvements identified for the study area are common to both the Regeneron Tempel Lane campus project and the Tempel Farms development. However, the implementation of these improvements will be governed by the site development schedules for these two developments. The following mitigation measures that were conditions of approval for the Tempel Farms development will need to be implemented by Regeneron as part of their site mitigation, as the Regeneron site will most likely be built prior to the construction of Tempel Farms:

- Tempel Lane Extension to 3<sup>rd</sup> Avenue Extension
- Tempel Lane & Red Mill Road (NY Route 151) – Eastbound left-turn lane, westbound right-turn lane, southbound right-turn lane, install traffic signal (with ped signals)
- Route 4 & Red Mill Road (NY Route 151) – Expand roundabout to 2-lanes northbound/southbound and modify eastbound approach to allow left-turn from both lanes
- Route 4 & Hotel Access (Hampton Inn) – Connect Tempel Lane (already constructed) to Route 4 and provide a southbound right-turn lane
- 3<sup>rd</sup> Avenue Extension & Tempel Lane – Construct an eastbound/westbound TWLT

Since both the Regeneron Tempel Lane campus and the Tempel Farms development have mutual responsibility for, and benefit from, these common improvements, the proportion of site traffic from each development that is contributing to the operations at the impacted intersections was identified. This distribution of site traffic could be used as a basis for allocating funding contributions toward the improvement costs. Below in Table 14 is a summary of the above improvements and the number of site trips entering the intersection from both developments. While the Tempel Farms study did not include pavement improvements to the existing Tempel Lane section in their TIS, due to the significant amount of volume they will be adding to the existing section, a comparison of site trips for the existing portion of Tempel Lane is provided.

**Table 14**  
**Fair Share Funding Assessment**

| Location                                    | Improvement  | Regeneron Site Trips | Percentage of Total | Tempel Farms Trips | Percentage of Total | Combined Site Trip Total |
|---|--|----------------------|---------------------|--------------------|---------------------|--------------------------|
| Tempel Lane Extension                       | Extend Tempel Lane to 3rd Ave Ext, provide NB Left/thru lane and right-turn lane at intersection | 310                  | 55%                 | 255                | 45%                 | 565                      |
| Tempel Lane & Route 151                     | EB Left-turn lane, WB right-turn lane, SB right-turn lane, and Signal                            | 194                  | 28%                 | 489                | 72%                 | 683                      |
| Route 4 & Route 151                         | Expand roundabout to 2-lanes NB/SB, modify EB approach to allow LT from both lanes               | 303                  | 35%                 | 553                | 65%                 | 856                      |
| Route 4 & Hotel Access (right-in/right-out) | Install SB right-turn lane   | 383                  | 34%                 | 744                | 66%                 | 1127                     |
| 3rd Ave Ext & Tempel Lane                   | Install TWLTL  | 310                  | 58%                 | 229                | 42%                 | 539                      |

## Conclusion

### **Analysis without Tempel Farms**

Subsequent to the completion of the March 2018 TIS, there have been several changes to the development program at Regeneron's Temple Lane Campus pertaining both to the configuration of uses and the sequencing of construction. These changes are as follows:

- Modified construction phasing;
- Increased building size of the final constructed size of the warehouse in Phase 1;
- Increased building size and number of employees for the manufacturing use; and
- Decreased number of employees for the office/lab use.

The current phasing plan will now have the manufacturing constructed in Phase 2 and the office/lab constructed in Phase 3. It is assumed that the construction of both of these phases will begin in 2018, with the manufacturing being completed first in early 2020 and the office/lab completed in late 2020. In addition, the preferred connection to 3<sup>rd</sup> Avenue Extension is now to extend Tempel Lane to 3<sup>rd</sup> Avenue Extension opposite Cedar Crest Drive (Alternative 2 in the March 2018 TIS), rather than a private access on 3<sup>rd</sup> Avenue Extension opposite of Woodlawn Avenue (Alternative 1 in March 2018 TIS).

While the number of employees will remain the same as the March 2018 TIS at the Tempel Lane site, the number of estimated site trips is estimated to be reduced, due to the reallocation of employees to different uses. It is estimated that there will be 15 fewer AM and 24 fewer PM peak hour trips with the change in the site plan. It is therefore concluded that the findings of the Full Build Analysis from the March 2018 TIS will remain the same and do not need to be updated as a result of this change to the development program.

However, the higher warehouse and manufacturing trip generation numbers (Phase 2) were used for this memo update for the purposes of analyzing the changed construction phasing (i.e., manufacturing facility preceding the office/lab facility). This will provide a conservative analysis, to determine what, if any, mitigation described in Section 5.3 of the March 2018 TIS, is required for site traffic associated with the combined warehouse and manufacturing site traffic (Phase 2). It is estimated that the warehouse and manufacturing will generate 259 total trips (204 in, 55 out) during the AM peak hour and 230 total trips (72 in, 158 out) during the PM peak hour. The traffic operations for this construction phase were tested without an access to 3rd Avenue Extension, as Tempel Lane would not be extended by the time the manufacturing was open.

While there is a change in LOS when comparing the Phase 2 development to the No-Build Condition for some movements, all are still estimated to operate at LOS D or better with the exception of the northbound thru/right movement at US Route 4 & Grandview Drive/Greenbush commons which is over capacity in the PM No-Build condition. As it is estimated that there will be less than 10 seconds of added delay per vehicle for the northbound thru/right movement at US Route 4 & Grandview Drive/Greenbush, mitigation is not recommended for Phase 2. It is requested that an exception from the NYSDOT policy to maintain the same LOS as No-Build in the Build Condition be granted for these locations for Phase 2 of the development.

The following Mitigation is recommended for the revised phased development plan:

**Phase 1**

- Tempel Lane & Route 151 – Monitor for installation of traffic signal if site driveway volumes are 10% greater than approved volumes
- Tempel Lane & Regeneron Access – Monitor site traffic volumes
- Spot repairs on Tempel Lane where pavement is currently crumbling

**Phase 2**

- Tempel Lane & Route 151 – Monitor for installation of traffic signal
- Tempel Lane & Regeneron Access – Monitor site traffic volumes
- Spot repairs on Tempel Lane where needed

**Phase 3**

- Extend Tempel Lane to 3<sup>rd</sup> Avenue Extension opposite of Cedar Crest Drive and provide a northbound left/thru lane and a right-turn lane
- US Route 4 & Grandview Drive/Greenbush Commons
  - Optimization of signal splits
- US Route 4 & 3rd Avenue Extension
  - Optimization of signal splits
- Red Mill Road (NY Route 151 & Tempel Lane)
  - Construct an eastbound left-turn lane, westbound right-turn lane, and southbound right-turn lane consistent with the proposed geometry in the Village at Tempel Farms Traffic Impact Study
  - Construct a traffic signal (with pedestrian equipment)
- 3rd Avenue Extension & Tempel Lane
  - Construct an eastbound and westbound TWLTL
  - Monitor for installation of traffic signal
- US Route 4 & Red Mill Road (NY Route 151)
  - Modify the roundabout to include two lanes northbound and southbound consistent with the improvements identified in the Village at Tempel Farms and Route 4 Corridor studies.
  - Modify the eastbound approach to allow left-turn from both lanes
- US Route 4 & Hotel Access (Hampton Inn)
  - Construct a southbound right-turn lane on Route 4
- Tempel Lane & Regeneron Access
  - Monitor site traffic volumes
- Tempel Lane
  - Construct a southbound left-turn lane on Tempel Lane at the Regeneron Access
  - Full depth reclamation with new asphalt top course for existing roadway (32' width)

### **Analysis with Tempel Farms**

In order to receive approval for the SEQRA amendment, a separate analysis has been conducted for a scenario with the Tempel Farms development and proposed mitigation included. To be consistent with the March 2018 TIS, the full build out site trips that were utilized for that report were utilized for this update with Tempel Farms. As noted in the Trip Generation section, the site trips for the current site plan are estimated to be slightly less than the March 2018 TIS volumes, but this difference will not have an impact on the findings and mitigation recommendations.

Capacity analyses of the study area were conducted to estimate the operations of the adjacent roadway system with and without the project generated traffic. The addition of the project generated traffic does reduce the LOS for some of the movements at the study area intersections. As a result, geometric and traffic control improvements have been identified to mitigate these impacts.

The analysis assumed the improvements associated with the Tempel Farm project would be constructed under the No-Build condition. The following additional improvements have been identified at the study area intersections:

#### **Phase 1**

- 3rd Avenue Extension & Tempel Lane - Monitor for installation of traffic signal if site driveway volumes are 10% greater than approved volumes
- Tempel Lane & Regeneron Access – Monitor site traffic volumes
- Spot repairs on Tempel Lane where pavement is currently crumbling

#### **Phase 2**

- 3rd Avenue Extension & Tempel Lane – Monitor for installation of traffic signal
- Tempel Lane & Regeneron Access – Monitor site traffic volumes
- Spot repairs on Tempel Lane where needed

#### **Phase 3**

- US Route 4 & Grandview Drive/Greenbush Commons – Optimize signal timings
- US Route 4 & 3<sup>rd</sup> Avenue Extension – Optimize signal timings
- 3rd Avenue Extension & Tempel Lane
  - Installation of a traffic signal
  - Convert TWLTL's to LT lanes
- Tempel Lane & Regeneron Access
  - Monitor site traffic volumes
  - Install SB left-turn lane
  - Install WB right-turn lane
- Tempel Lane - Full depth reclamation with new asphalt top course

**Fair Share Funding Assessment**

Many of the physical improvements identified for the study area are common to both the Regeneron Tempel Lane campus project and the Tempel Farms development. However, the implementation of these improvements will be governed by the site development schedules for these two developments. The following mitigation measures that were conditions of approval for the Tempel Farms development will need to be implemented by Regeneron as part of their site mitigation, as the Regeneron site will most likely be built prior to the construction of Tempel Farms:

- Tempel Lane Extension to 3<sup>rd</sup> Avenue Extension
- Tempel Lane & Red Mill Road (NY Route 151) – Eastbound left-turn lane, westbound right-turn lane, southbound right-turn lane, install traffic signal (with ped signals)
- Route 4 & Red Mill Road (NY Route 151) – Expand roundabout to 2-lanes northbound/southbound and modify eastbound approach to allow left-turn from both lanes
- Route 4 & Hotel Access (Hampton Inn) – Connect Tempel Lane (already constructed) to Route 4 and provide a southbound right-turn lane
- 3<sup>rd</sup> Avenue Extension & Tempel Lane – Construct an eastbound/westbound TWLTL

Since both the Regeneron Tempel Lane campus and the Tempel Farms development have mutual responsibility for, and benefit from, these common improvements, the proportion of site traffic from each development that is contributing to the operations at the impacted intersections was identified. This distribution of site traffic could be used as a basis for allocating funding contributions toward the improvement costs. While the Tempel Farms study did not include pavement improvements to the existing Tempel Lane section in their TIS, due to the significant amount of volume they will be adding to the existing section, a comparison of site trips for the existing portion of Tempel Lane was also provided.

Please let me know if you have any questions or need any additional information.

Sincerely,

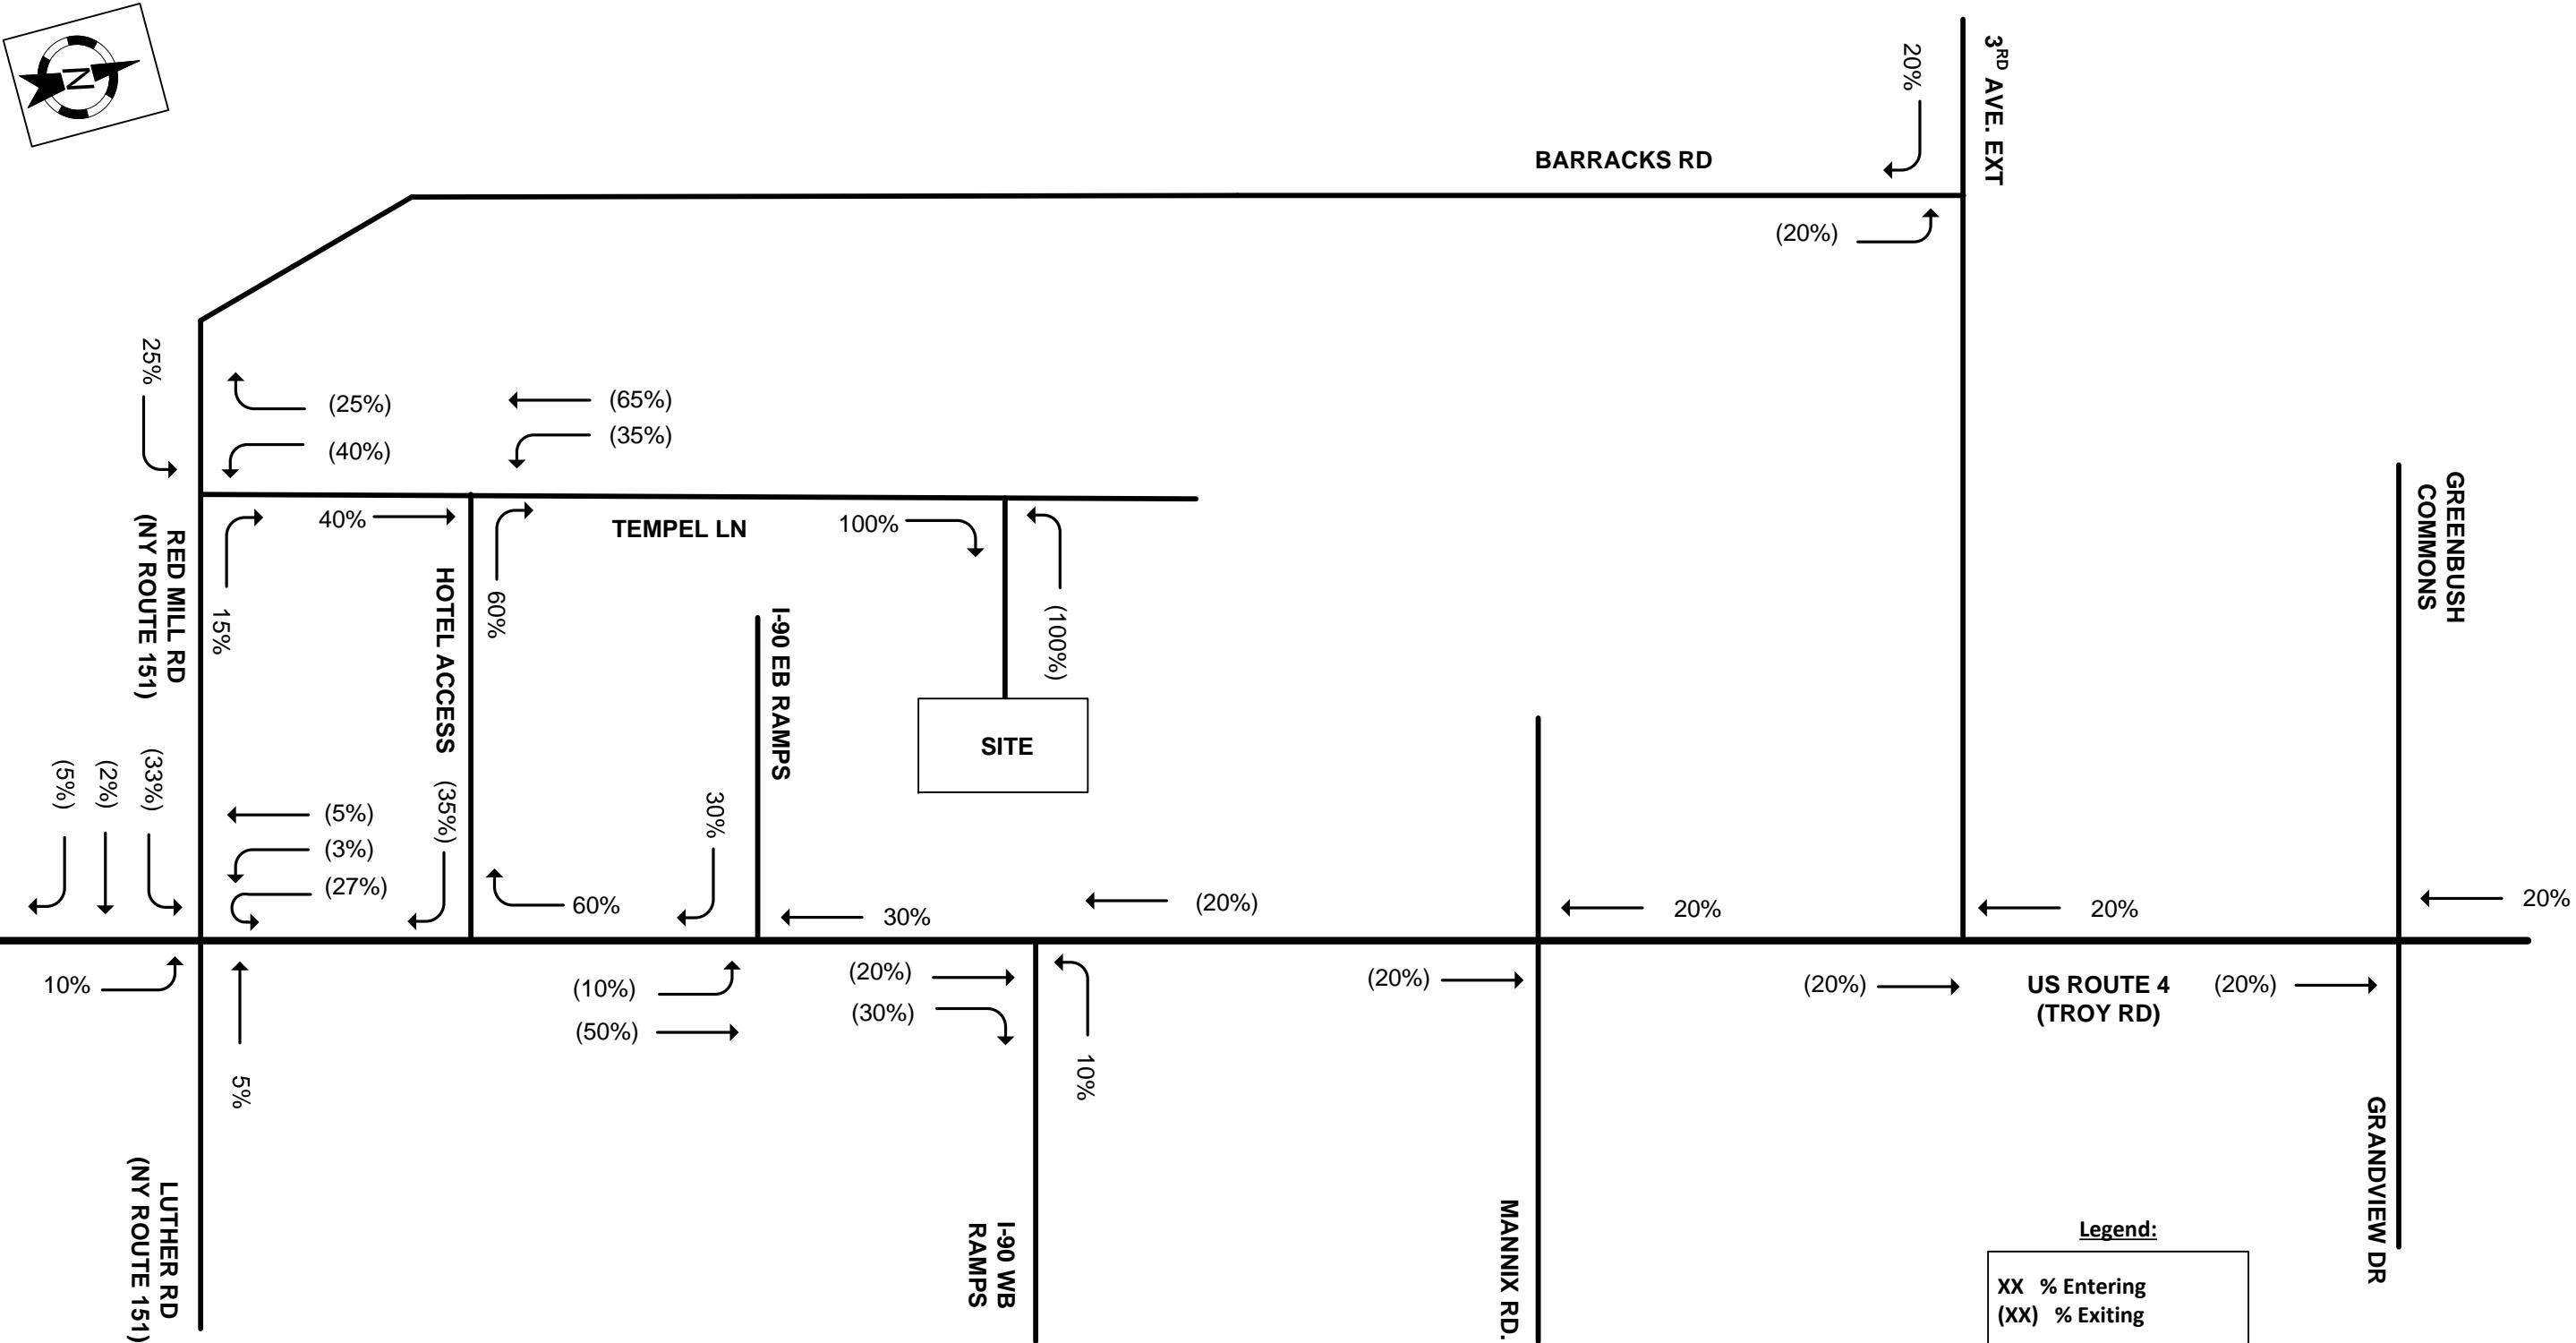

Sarah E. Bowman, P.E., PTOE

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

LOCATION: NY 151 & Tempel Lane

DATE: 7/25/2017  
CHA PROJ. #: 33295

DESCRIPTION:

Phase 2 Volumes

source: *A Policy on Geometric Design of Highways and Streets, 6th Edition*; American Association of State Highway and Transportation Officials (2011): Table 9-23

## TRAFFIC SIGNAL WARRANT SUMMARY

Project : **Regeneron**  
 Location: **Tempel & NYS Route 151**  
**East Greenbush, NY**

Analyst: **SEB**  
 Date: **July 25, 2018**  
 Checked By:  
 CHA Project No. **33295**

Intersection: **Tempel Lane & Red Mill Road (NY Route 151)**

Major Street: **Red Mill Road (NY Route 151)**  
 Minor Street: **Tempel Lane**

Number of Approach Lanes: **1**  
 Number of Approach Lanes: **1**

Critical Approach Speed: **45** mph  
 Posted Speed Limit: **45** mph

Number of Intersection Approaches: **3**

### **Volume Level Criteria**

1. Is the critical speed of major street traffic > 40 mph ?  Yes  No
2. Is the intersection in a built-up area of isolated community of <10,000 population?  Yes  No

Population: **16,500**

If Question 1 or 2 above is answered "Yes", then use "70%" volume level      Use: **70** %

### **Traffic Volume Input**

Analysis Condition: **Build Sensitivity Analysis**

Data Source: **ATR Data & Trip Gen**

|  | Hourly Volumes |        |        |        |         |         |        |       |       |       |       |       |     |

Notes:

Phase 2

## WARRANT 1- EIGHT-HOUR VEHICULAR VOLUME

Applicable:  Yes      No

Satisfied: Yes  No

*Warrant 1 is satisfied if Condition A or Condition B is "100%" satisfied.  
Warrant is also satisfied if both Condition A and Condition B are "80%" satisfied. Should be applied only after adequate trial of other alternatives that would cause less delay and inconvenience to traffic has failed to solve the traffic problem.*

### Condition A - Minimum Vehicular Volume

| Number of lanes for moving traffic on each approach |                     | Vehicles per hour on major street (total of both approaches) |            |            |            | Vehicles per hour on higher-volume minor-street approach (one direction only) |            |            |            |
|---|---------------------|--|------------|------------|------------|---|------------|------------|------------|
| <u>Major Street</u>                                 | <u>Minor Street</u> | <u>100%</u>  | <u>80%</u> | <u>70%</u> | <u>56%</u> | <u>100%</u>   | <u>80%</u> | <u>70%</u> | <u>56%</u> |
| 1 .....   | 1 .....             | 500  | 400        | 350        | 280        | 150   | 120        | 105        | 84         |

Warrant Criteria 80% Satisfied for Conditions A and B? NO Number of Hours Satisfied: 6

## **WARRANT 2 - FOUR-HOUR VEHICULAR VOLUME**

If all four points lie above the appropriate line, then the warrant is satisfied.

Applicable:  Yes      No

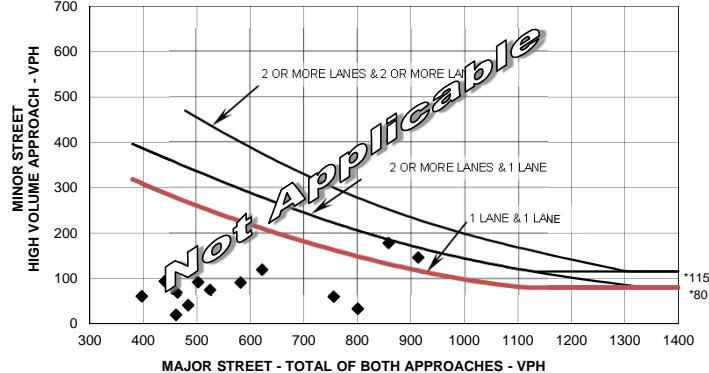

Satisfied:  Yes       No

**Speed on mainline is above 40 mph or community less than 10,000 - use criteria for 70% volume level**

| Volumes |              |              |
|---------|--------------|--------------|
| Hour    | Major Street | Minor Street |
| 6-7 am  | 461          | 20           |
| 7-8 am  | 801          | 33           |
| 8-9 am  | 756          | 60           |
| 9-10am  | 484          | 41           |
| 10-11am | 397          | 61           |
| 11-12pm | 440          | 94           |
| 12-1pm  | 504          | 92           |
| 1-2pm   | 464          | 69           |
| 2-3pm   | 583          | 91           |
| 3-4pm   | 623          | 119          |
| 4-5pm   | 858          | 178          |
| 5-6pm   | 913          | 146          |
| 6-7pm   | 526          | 75           |

Plot four volume combinations on the applicable figure below.

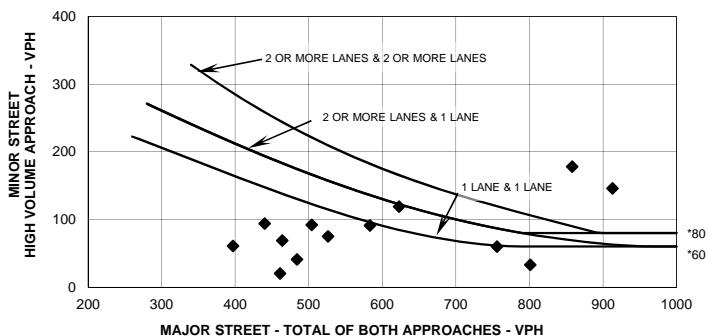

**FIGURE 4C-1: Criteria for "100%" Volume Level**

\* Note: 115 vph applies as the lower threshold volume for a minor street approach with two or more lanes & 80 vph applies as the lower threshold volume threshold for a minor street approach with one lane.

**FIGURE 4C-2: Criteria for "70%" Volume Level**

(Community Less than 10,000 population or above 40mph (70 km/hr) on Major Street)

\* Note: 80 vph applies as the lower threshold volume for a minor street approach with two or more lanes & 60 vph applies as the lower threshold volume threshold for a minor street approach with one lane.

### **WARRANT 3 - PEAK HOUR VEHICULAR VOLUME**

The Peak Hour Volume signal warrant shall be applied only in unusual cases, such as office complexes, manufacturing plants, industrial complexes, or high-occupancy vehicle facilities that attract or discharge large numbers of vehicles over a short time.

#### **CONDITION A**

##### **Criteria**

###### **1. Total Stopped Time Delay on Minor Approach**

|  |         |         |
|--|---------|---------|
| Average Delay per vehicle (sec):   | AM 19.6 | PM 33.8 |
| Peak Hour Volume:  | 62      | 180     |
| Total 1-hour stopped delay (veh-hrs):  | 0.3     | 1.7     |
| Volume Criteria  | 4       | 4       |
| Criteria: 4 veh-hrs for 1-lane approach; or<br>5 veh-hrs for 2-lane approach |         |         |

Criteria 1 Satisfied?  Yes  No  
 Criteria 2 Satisfied?  Yes  No  
 Criteria 3 Satisfied?  Yes  No

Note: All 3 criteria need to be satisfied for Condition A to be met

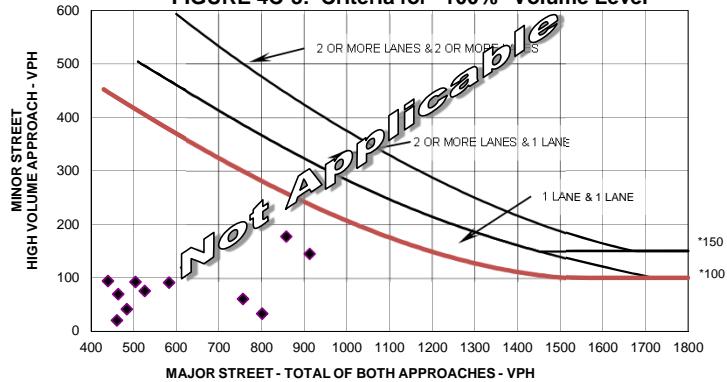

#### **CONDITION B**

*Speed on mainline is above 40 mph or community less than 10,000 - use criteria for 70% volume level*

| Hour    | Major Street | Minor Street |
|---------|--------------|--------------|
| 6-7 am  | 461          | 20           |
| 7-8 am  | 801          | 33           |
| 8-9 am  | 756          | 60           |
| 9-10am  | 484          | 41           |
| 10-11am | 397          | 61           |
| 11-12pm | 440          | 94           |
| 12-1pm  | 504          | 92           |
| 1-2pm   | 464          | 69           |
| 2-3pm   | 583          | 91           |
| 3-4pm   | 623          | 119          |
| 4-5pm   | 858          | 178          |
| 5-6pm   | 913          | 146          |
| 6-7pm   | 526          | 75           |

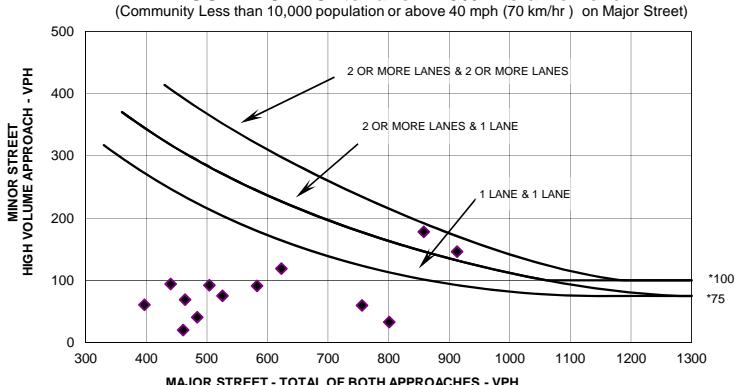

Plot volume combination on the applicable figure below.

**FIGURE 4C-3: Criteria for "100%" Volume Level**

\* Note: 150 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 100 vph applies as the lower threshold volume threshold for a minor street approach with one lane.

**FIGURE 4C-4: Criteria for "70%" Volume Level**

\* Note: 100 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 75 vph applies as the lower threshold volume threshold for a minor street approach with one lane.

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab).  
Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab).  
Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

<sup>d</sup> Dominant lane on roundabout approach

| Approach                 | 965          | 1.5         |      | 1.433      |               | 218.2        | LOS F             | 61.2             | 1552.5                |               |             |                |             |                |
| Intersection             | 3982         | 1.1         |      | 1.433      |               | 68.4         | LOS E             | 61.2             | 1552.5                |               |             |                |             |                |

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab).  
Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

<sup>d</sup> Dominant lane on roundabout approach

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab).  
Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

<sup>d</sup> Dominant lane on roundabout approach

| Intersection             | 2998         | 2.0         |      | 0.754      |               | 9.4          | LOS A             | 7.2              | 180.5                 |               |             |                |             |                |

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

<sup>d</sup> Dominant lane on roundabout approach

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akcelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

<sup>d</sup> Dominant lane on roundabout approach

| Intersection              | 1535         | 2.0         |      | 0.713      |               | 11.9         | LOS B             | 8.2              | 208.4                 |               |             |                |             |                |

Site Level of Service (LOS) Method: Delay & v/c (HCM 2010). Site LOS Method is specified in the Parameter Settings dialog (Site tab).  
Roundabout LOS Method: Same as Signalised Intersections.

Lane LOS values are based on average delay and v/c ratio (degree of saturation) per lane.

LOS F will result if v/c > 1 irrespective of lane delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all lanes (v/c not used as specified in HCM 2010).

Roundabout Capacity Model: SIDRA Standard.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.
